Invention Title	DEVELOPMENT AND FABRICATION OF HELMET COOLING SYSTEM
Publication Number	1/2025
Publication Date	03/01/2025
Publication Type	INA
Application Number	202441101763
Application Filing Date	22/12/2024
Priority Number	
Priority Country	
Priority Date	
Field Of Invention	TEXTILE
Classification (IPC)	A42B0003040000, A42B0003280000, A45D0008400000, A61B0005000000, A42B0001012000

Inventor

Name	Address	Country
Mr. Ch. Bhanuprakash	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India
Mr. S. Uma Mahesh	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India
Dr. S. Venkata Sai Sudheer	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India
Mr. G. Mahesh	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India
Mr. Ch. Naveen Kumar	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India
Dr. I. Ramu	Department of Mechanical Engineering, Vishnu Institute of Technology, Vishnupur, Bhimavaram -2, West Godavari, Andhra Pradesh, Pin : 534202, India.	India

Abstract:

6. ABSTRACT: A biker helmet should generally be light in weight and provide ample ventilation because bike riding can be an intense aerobic activity which significantl body temperature, and the head in particular needs to be able to regulate its temperature. The dominant form of the helmet up to the 1970s was the "hairnet" style, construction made of rubber bars covered in leather. This offered acceptable protection from scrapes and cuts, but only minimal impact protection, and was mainly t racing cyclists. Now a day's people are facing problem with helmet due to heavy heat and sweat inside it. To reduce this, we have to provide cooling effect by using th module. To calculate the cooling effect, we have to use an empirical formula & taken the calculations.

Complete Specification

Description:DESCRIPTION:

Field of the invention:

The field of the invention relates to mechanical engineering, specifically focusing on the development of a cooling system for motorcycle helmets. This invention introduces thermoelectric cooling technology to address the problem of heat build-up inside helmets during prolonged use, particularly in warm climates or during extended rides. The solution employs thermoelectric modules, heat sinks, and cooling fans to provide an air-conditioned effect within the helmet, enhancing rider comfort and safety.

Background of the invention:

Helmet Cooling Challenge is the project addresses the issue of excessive heat and sweat inside helmets, which causes discomfort for riders. This problem is particularly significant in warmer climates and during long rides, where the internal temperature of the helmet rises, making it less appealing to wear.

The history of helmets highlights their transition from leather skullcaps to advanced designs integrating materials like carbon fibre and Kevlar. However, even with these advancements, comfort in terms of heat regulation has remained a concern.

Thermoelectric modules, based on principles like the Seebeck and Peltier effects, provide a solution for active cooling. This solid-state heat transfer technology has been widely used in applications like medical devices and electronics cooling, but its application to helmet cooling is innovative.

Helmet cooling system research studies on helmet cooling mechanisms, including phase-change materials and reflective designs. However, the integration of thermoelectric cooling for air-conditioned helmets marks a novel approach. This background lays the foundation for developing an air-cooled helmet, addressing a pressing need by utilizing cutting-edge thermoelectric technology.
